PROFILE

UX/UI & Product Designer with 3+ years of end-to-end experience (from research to functional prototype), specialized in critical flows and design systems for digital health and product. I integrate generative AI across the entire process (research, prototyping, code), shortening cycles from weeks to days. Background in Philosophy and a decade of teaching: first Philosophy, now UX/UI at Digital House / Universidad de San Andrés. I bring reasoned criteria to every design decision, not just execution.

PROFESSIONAL EXPERIENCE

Digital House (Universidad de San Andrés), UX/UI Design Professor Feb 2023 – Present

- I evaluate the reasoning behind 100+ product design projects to date, designing research, ideation, and prototyping activities based on real-world cases. NPS above 8.5.
- I turned the “why” behind every design decision into a teachable method (the same standard I apply to my own work).

Freelance, Web Design, Development & Vibe Coding Jan 2023 – Present

- I designed and developed 7 institutional websites end-to-end (legal, healthcare, food service, and tourism), from brief to production, for independent clients.
- I shortened the design-to-production cycle by integrating vibe coding (Claude Code): from wireframe to deployment on Vercel, without a traditional handoff.

Gaucha Digital, UX/UI Designer Sep 2025 – Jun 2026

- I grounded the information architecture redesign and design system for two digital health websites for GSK (Basta de Meningitis, VSR) in UX audits and AI-generated prototyping, accelerating iteration with stakeholders.
- I analyzed real user behavior (Microsoft Clarity: heatmaps, navigation, clicks) to justify an interactive search tool and questionnaires, improving retention and conversion with evidence, not intuition.
- I redesigned the landing page, checkout, and component system for Carbón Los Leños (+15% activation), with handoff documentation that reduced friction with development.

V-Go, UX/UI Designer Mar 2024 – Oct 2024

- I launched the vendor onboarding system (200+ registrations) validated through direct testing, reducing the sales team's operational effort by 60%.
- I redesigned the mobile interface, in-store pickup flow (300+ purchases), and post-order rating (400+ evaluations) through iterative testing, with decisions backed by real usage data, not assumptions.

Informental, UX/UI Researcher Sep 2023 – Feb 2024

- I led end-to-end research in mental health (interviews, affinity/empathy maps, card sorting, usability testing with Maze) to ground product decisions before writing a single line of code.
- I identified critical friction points through heat maps and efficacy metrics, and prototyped and validated solutions across multiple fidelities before moving to development.

EDUCATION

Bachelor's Degree and Teaching Certification in Philosophy, Universidad Católica Argentina | 2008 – 2014

UX/UI Design, UX Research & UX Writing, Coderhouse | 2021 – 2022

Web Development, Escuela Da Vinci | 2023

Vibe Coding for UX/UI Designers, Udemy | 2025

Figma UI/UX Design Advanced, Udemy | Present

SKILLS

Design & Product: UX/UI Design · Interaction Design · AI-Generated Prototyping · Vibe Coding · UX Research · Information Architecture · User Flows · Wireframing · Usability Testing · Responsive Design · Content Design · Accessibility

Collaboration: Stakeholder Management · Developer Handoff · Cross-Functional Collaboration with Product & Engineering Teams

Tools: Figma · FigJam · Claude · Claude Code · Figma Make · Google AI Studio · Lovable · Stitch · Maze · UXTweak · Microsoft Clarity

Methodologies: Design Thinking · Product Thinking · Dual Track Agile · Scrum · Kanban · Competitive Benchmarking

Languages: English (C1) · Spanish (Native)
